

Status of Claims

The following new claims 50-57 were previously submitted in the amendment and RCE filed on June 30, 2004.

Claim 50 (new) A gaming apparatus comprising:

a gaming machine having a player interface and circuitry for issuing a signal upon the occurrence of a predetermined event;

a lottery game apparatus to provide a lottery game; and

an interface in data communication with the gaming machine and the lottery game apparatus, the interface activating the lottery game apparatus in response to the signal issued by the gaming machine.

Claim 51 (new) The gaming apparatus according to claim 50 wherein the gaming machine comprises a slot machine.

Claim 52 (new) The gaming apparatus according to claim 50 further comprising a central lottery computer located at a remote site and in data communication with the lottery game

apparatus, the central lottery computer providing lottery game transmissions to the lottery game apparatus.

Claim 53 (new) A gaming system comprising:

a slot machine having a player interface and circuitry to issue a signal upon the occurrence of a predetermined event;

a lottery game apparatus to provide a lottery game;

an interface in data communication with the slot machine and the lottery game apparatus, the interface activating the lottery game apparatus in response to the signal issued by the slot machine; and

a central lottery computer located at a remote site and in data communication with the lottery game apparatus to provide a lottery game transmission to the lottery game apparatus.

Claim 54 (new) A gaming system comprising:

a lottery game apparatus to provide a lottery game;

a central lottery computer at a remote location and in data communication with the lottery game apparatus to provide a lottery game transmission to the lottery game apparatus;  
and

an interface in data communication with the lottery game apparatus and having interface circuitry adapted to receive a signal from a slot machine, the interface activating the lottery game apparatus in response to the signal to allow a player to participate in the lottery game.

Claim 55 (new) A gaming apparatus comprising:

a lottery game apparatus to provide a lottery game; and

an interface in data communication with the lottery game apparatus, the interface comprising circuitry to receive a signal from a slot machine and activate the lottery game apparatus in response to the signal so as to allow a player

to participate in a lottery game.

Claim 56 (new) The gaming apparatus according to claim 55 further comprising a slot machine having a player interface and circuitry to issue the signal upon the occurrence of a predetermined event.

Claim 57 (new) A slot machine comprising:

a player interface;

circuitry that issues a signal upon the occurrence of a predetermined event on the slot machine;

a lottery game apparatus that provides a lottery game; and

an interface in communication with the circuitry and the lottery game apparatus, the interface configured to receive the signal issued by the circuitry and activate the lottery game apparatus to allow a player to participate in the lottery game upon receipt of the signal issued by the circuitry.

This supplemental amendment adds the following new claims  
58-60:

Claim 58 (new) A gaming apparatus comprising:

an electronic gaming machine having operational control  
circuitry and a player interface to allow a player to play  
the electronic gaming machine;

a lottery game module in electronic data communication with  
the operational control circuitry of the electronic gaming  
machine and comprising microprocessor means to graphically  
generate a lottery drawing upon the occurrence of a  
predetermined event on the electronic gaming machine and  
means for storing data defining at least one predetermined  
event that must occur on the electronic gaming machine in  
order for the microprocessor means to graphically generate  
the lottery drawing;

a display device to display the graphically generated lottery  
drawing;

means for activating the lottery game module to graphically

generate the lottery drawing upon the occurrence of the predetermined event on the electronic gaming machine;

an interface in communication with the lottery game module to allow a player to input desired lottery numbers and play the graphically generated lottery drawing when the lottery game module is activated; and

means for indicating the player has won the lottery drawing.

Claim 59 (new) The gaming apparatus according to claim 58 wherein the lottery drawing is modeled after a lottery drawing chosen from the group consisting of Pick-3, Pick-4, Pick-5, Pick-6, Lotto® and Powerball®.

Claim 60 (new) A gaming machine configured to generate a casino game of chance and a simulated lottery drawing:

electronic circuitry means configured to generate a casino game of chance and a simulated lottery drawing;

a player interface that allows a player to play the casino game of chance;

data storage means for storing data defining at least one predetermined event that must occur during play of the casino game of chance in order for the electronic circuitry means to generate the simulated lottery drawing;

means for controlling the electronic circuitry means to generate the simulated lottery drawing upon the occurrence of the predetermined event;

an interface in communication with electronic circuitry means to allow a player to input desired lottery numbers and play the simulated lottery drawing when the controlling means controls the electronic circuitry means to generate the simulated lottery drawing;

a display device to display the simulated lottery drawing; and

means for indicating the player has won the lottery drawing.
